ABSTRACT

Modern day technology has been considered as a boon by the majority of our society. Today all human beings find technology making their work easier. Let's consider a farmer who plays a major role in contributing largely to our nation's economy. Digitization has made the work of farmers a lot simpler. For a work which the farmer previously needed to stand in long queues waiting for his number to be called to get his work done, it can now be done with the click of a button. Keeping this in mind we have implemented this idea on our project which involves the transactions that take place between the farmer and the manufacturer for buying equipment/machinery required for his farm. Using this the farmer will be able to buy equipment/machinery online which will then arrive at his doorstep.

INTRODUCTION

Most people are unaware of the true significant of agriculture in our society. It's more than just to provide food to the population in a country. Agriculture does not only provide our nourishment for our daily intake but also an income source for every single nation that exists on this planet.

In India there are a total of 118.7 million farmers. And this population contributes to 18% of our country's Gross Domestic Product (GDP), hence becoming a major contributor to India's economy. When social development rose to its peak so did the importance of technology in agriculture. The farming work which was manually being done, was now operated by machines. The burden was now being lessened as man operated equipment rules the field. The importance of technology in agriculture made major changes in farming business.

Today majority of the farmers use modern farming equipment/machinery which saves them both time as well as money. Keeping this in mind we have designed this software that organizes and makes this famer dealer transaction easier. Using this software the farmer will be able to buy equipment/machinery and he can also keep track of the equipment/machinery he owns.

PROBLEM STATEMENT

Problem Definition:

It is hard for the farmer to go from dealer to dealer as he/she has a lot of options available. Going enquiring from dealer to dealer is also a waste of time and he/she also might not be able to visit all dealer. Same holds to the various equipments from different manufacturers.

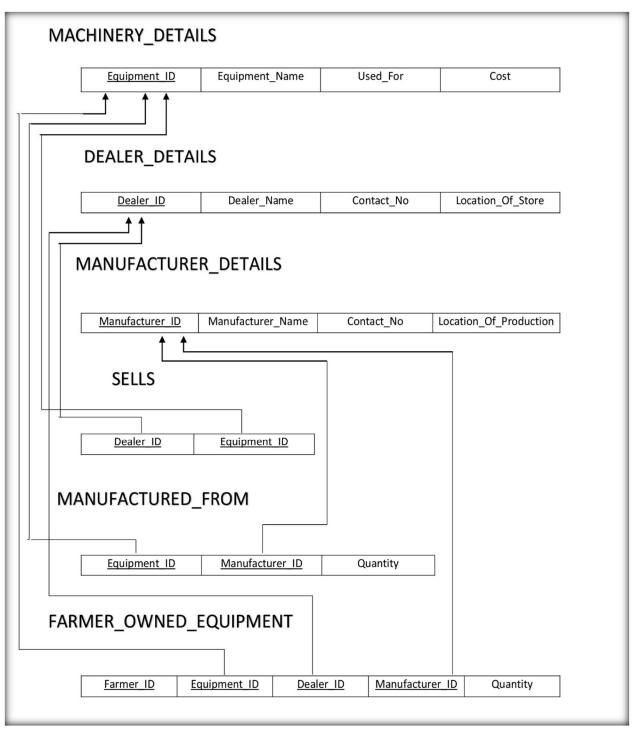

Objective:

The objective is

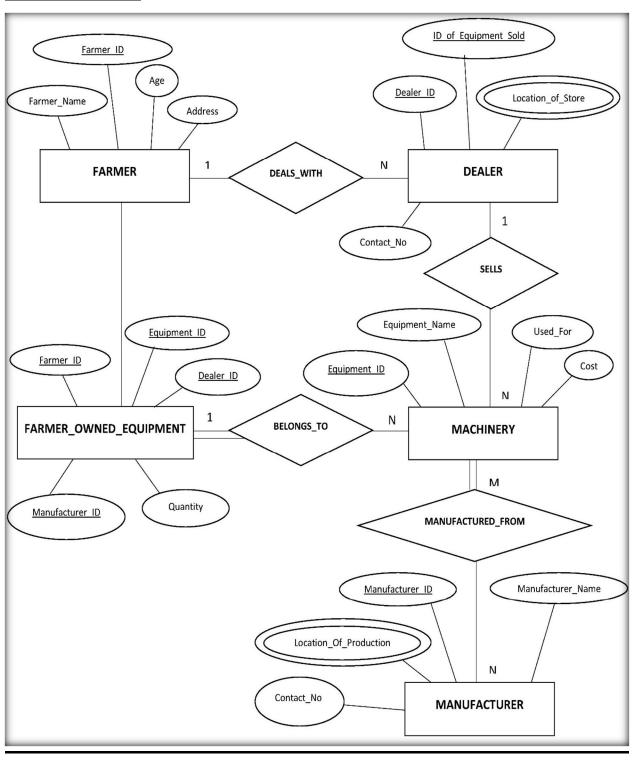

To develop a website which will show the farmer a systematic and organised list of dealers and manufacturers available. He/she will be able to choose which equipment he wants he wants to buy from which category where he will have the option to choose from the various dealers.

DATABASE DESIGN

Relational Schema Diagram:

ER Diagram:

FRONTEND TECHNOLOGY

List of software used for frontend

1. Hyper Text Markup Language (HTML)

Hypertext Markup Language is the standard markup language for creating web pages and web applications.

2. Cascading Style Sheets (CSS)

Cascading Style Sheets is a style sheet language used for describing the presentation of a document written in a markup language like HTML.

3. JavaScript

JavaScript, often abbreviated as JS, is a high-level, interpreted programming language. It is a language which is also characterized as dynamic, weakly typed, prototype-based and multi-paradigm.

BACKEND TECHNOLOGY

List of software used for Backend

1.PHP

Hypertext Preprocessor is a server-side scripting language designed for Web development, and also used as a general-purpose programming language. It was originally created by Rasmus Lerdorf in 1994, the PHP reference implementation is now produced by The PHP Group.

Database:

2.MySQL

MySQL is an open-source relational database management system. Its name is a combination of "My", the name of co-founder Michael Widenius's daughter, and "SQL", the abbreviation for Structured Query Language.

Server:

3.WAMP

WAMP is a web development platform on windows that allows you to create dynamic web applications with Apache2, PHP, MySQL. It acts like a virtual server on your computer.

WEBSITE SNAPSHOTS

1) Home page

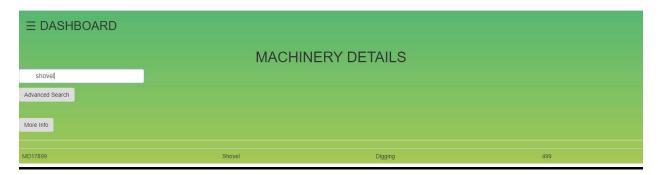

2) Machinery details

3) Searching for a machine

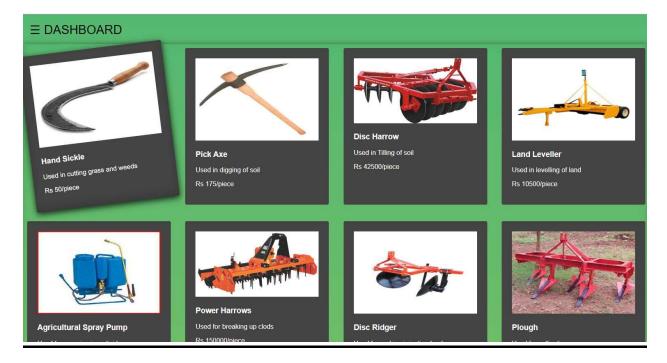

4) Selecting a machine based on category

5) Machines available in that category

6) Viewing the images of the available machinery

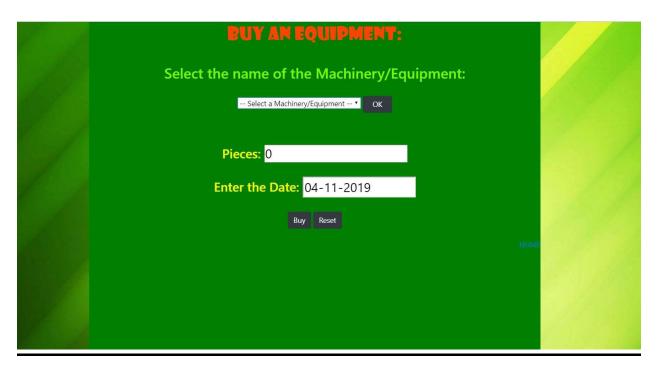

7) Viewing dealer details

≡ DASHBOARD								
DEALER DETAILS								
Search								
Dealer ID	Dealer Name	Contact No.	Address					
DD650	Shanker Agri Equipments	9845019462	Kuloor Road, Kavoor, Mangalore, Karnataka 575015

F9999	Pick Axe	3	Shanker Agri Equipments	175	2019-11-04

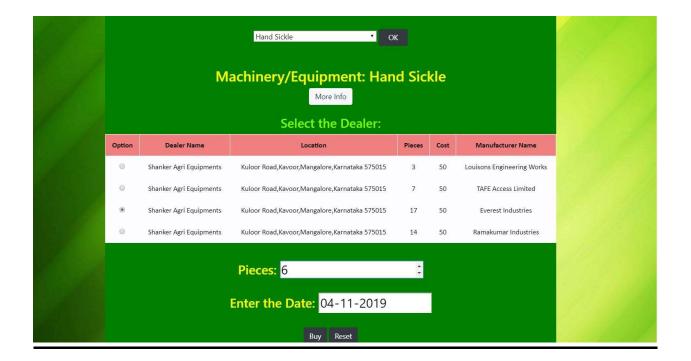

14) Update in the quantity available after buying

15) Viewing the equipments bought

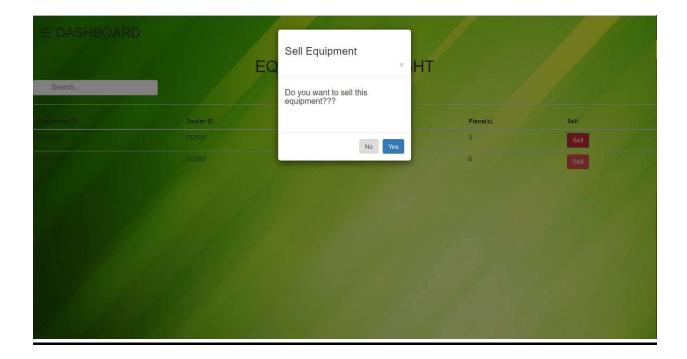

16) Buying another equipment

17) All equipments owned

18) Selling an equipment

19) Changes in owned equipment table after deletion

CONCLUSION

This 'Online Farming Equipment/Machinery Buying System' is successfully designed and developed to fulfilling the necessary requirements as the system is very much user friendly and very efficient. This project has been developed to meet the real world transactions happening in the present world.

This system allows the administrator to store farming equipment/machinery details along with category under which it comes. The implementation of the system in the organization will considerably reduce data entry and time. Here the farmer will also be able to view through details of the dealer as well as the manufacturer thus making it easy for him to gather the required information.

Keeping in mind all the real world problems faced by a farmer for buying equipment/machinery we have designed this system which makes the farmer's task of buying the equipment/machinery in the market simpler with just the click of a button.
